

KEYpak[®] Connection

"World Leader in Open Document Exchange Solutions"

Customers license the KEYpak Connection from Soft•Switch and the KEYpak translator library from Keyword.

Product Description

KEYpak is the name for a family of products that provide document interchange services on many different platforms. KEYpak Connection used in conjunction with either the KEYpak IBM MVS or KEYpak IBM VM translator library provides an extensive, fully integrated document translation service for Soft•Switch Central.

Editable Document Exchange

KEYpak enables Soft•Switch users to productively share documents created by personal computer users and users of other host systems regardless of the type of document or word processing software they use. Each type of user has the ability to work in their preferred environment with fully editable documents and all of the original document attributes intact.

KEYpak converts word processing documents, including text and formatting codes, bi-directionally between IBM mainframe document processing software such as DCF/Script or DisplayWrite/370 and most major word processing software running on DOS, Macintosh, Windows, OS/2 and UNIX platforms as well as a wide variety of vendor specific platforms. KEYpak produces a document which is fully revisable by word or document processors of the user's choice. Over forty different translators are supported.

Introduction

Soft•Switch Inc. is the leader in standards-based, high performance enterprise mail networking. Soft•Switch Central™ is an advanced multi-protocol electronic mail switch or Message Transfer Agent (MTA).

in co-operation with Soft•Switch, offers mail enabled document translation services which are fully integrated with Soft•Switch Central. Soft•Switch customers now have access to the extensive portfolio of high quality, mail-enabled, document translators.

KEYpak Connection is the interface to Soft•Switch Central which allows Keyword's KEYpak translators to be used in both the VM and MVS versions of Soft•Switch Central.

End User Perspective

When KEYpak is used in conjunction with KEYpak Connection, document translation occurs completely automatically as viewed by the end user. Soft•Switch Central automatically invokes the appropriate KEYpak translation module before distributing the electronic mail message to the end user.
