

KEYpak is also available outside of the Soft•Switch environment and can be implemented either centrally or distributed across the corporate network. KEYpak is available in DOS, Macintosh, Windows, OS/2, UNIX, HP MPE and DEC VAX environments.

In most environments, KEYpak can be used directly via a command line implementation. In many applications, KEYpak has been integrated into the native office automation or electronic mail delivery system. Additional custom integration for new environments are also available through our Professional Services group.

Features

- Integrates with Soft•Switch Central to provide automatic, seamless document exchange services
- Delivers fully revisable document conversion across IBM and heterogeneous networks
- Supports a broad variety of host, PC and workstation-based word processors
- Fully internationalized
- Requires minimal training

KEYpak Benefits

- Maximizes usage of existing hardware and software investments
- Facilitates sharing of documents by users of incompatible document processing systems
- Allows users to choose the most appropriate document processing system
- Extends the IBM network capabilities to previously incompatible application environments
- Preserves existing skill sets
- Improves user productivity in a multi-vendor environment
- Eliminates re-keying of information
- Saves on fax and courier costs

System Requirements

- Soft•Switch Central
- KEYpak Connection (supplied by Soft•Switch)
- KEYpak translation library modules as required
