

KEYpak[®] EMX

"World Leader In Open Document Exchange Solutions"

Introduction

KEYpak For EMX provides Open Document Exchange services for Soft•Switch's Enterprise Mail Exchange. KEYpak's set of comprehensive high fidelity document converters combined with Soft•Switch's Open Object Translation Interface (OOTI) provide seamless, in-transit, conversion of E-mail attachments within Soft•Switch EMX backbones.

KEYpak For EMX ensures all end users receive E-mail attachments in their preferred format. For example, KEYpak EMX will automatically convert attachments originating from Microsoft Word to the preferred format of each recipient — including WordPerfect, DCA/RFT (OfficeVision) or DECdx (ALL-IN-1). All attachments remain fully formatted and revisable, as if they had been created in the native application.

Features

- Delivers fully revisable document conversion across heterogeneous networks.
- Supports a broad variety of host, PC and workstation-based word processors.
- Seamless integration through the EMX OOTI API.

Open Document Exchange Benefits

- Facilitates sharing of documents by users of incompatible document processing systems.
- Allows users to choose an appropriate document processing system.
- Maximizes existing hardware and software investments.
- Preserves existing skill sets.
- Improves user productivity in a multi-vendor environment.
- Eliminates re-keying of information.
- Saves on fax and courier costs.

Additional E-mail Backbone

Document Conversion Benefits

- Transparent document conversion services improve end user workflow by eliminating conversion time by the client.
- Minimizes resource requirements of E-mail clients or user agents.
- Delivers consistent, high quality conversion services which are independent of different client converters or filters.
