## ODX.400

*“World Leader in Open Document Exchange Solutions”*

### Introduction

KEYpak ODX.400 provides Open Document Exchange services for X.400 and proprietary Message Transfer Agents (MTA). ODX.400 is a comprehensive set of high fidelity document conversion modules, utilities and an API for seamless, in-transit, conversion of E-mail attachments. It supports over 40 document, image and graphic formats.

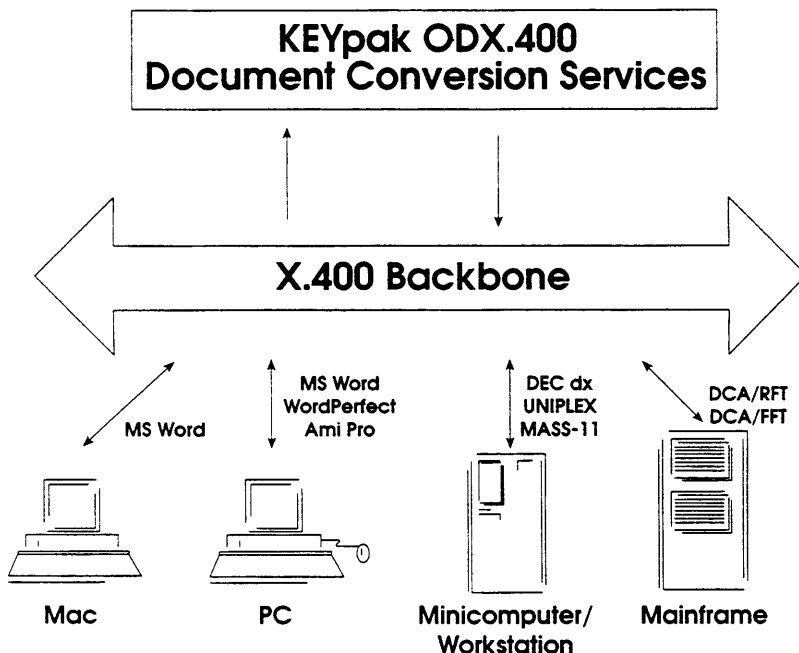

KEYpak ODX.400 ensures that all end users receive E-mail attachments in their preferred format. For example, ODX.400 will automatically convert attachments originating from Microsoft Word to the preferred format of each recipient — including WordPerfect, DCA/RFT (OfficeVision) or DEC dx (ALL-IN-1). All attachments remain fully formatted and revisable, as if the sender had created the document in the recipient's native application.

### Features

- Delivers fully revisable document conversion across heterogeneous networks.
- Supports a broad variety of host, PC and workstation-based word processors.
- Open interface integrates with X.400 and vendor specific MTAs.

### Open Document Exchange Benefits

- Facilitates sharing of documents by users of incompatible document processing systems.
- Allows users to choose an appropriate document processing system.
- Maximizes existing hardware and software investments.
- Preserves existing skill sets.
- Improves user productivity in a multi-vendor environment.
- Eliminates re-keying of information.
- Saves on fax and courier costs.

### Additional Backbone MTA

#### Document Conversion Benefits

- Transparent document conversion services improve end user workflow by eliminating conversion time by the client.
- Minimizes resource requirements of E-mail clients or user agents.
- Delivers consistent, high quality conversion services which are independent of different client converters or filters.
