VAX/VMS

"World Leader in Open Document Exchange Solutions"

Sharing Documents Across Multi-vendor Desktops through Network Application Support (NAS)

Introduction

KEYpak is an NAS Base Application that allows users to share documents across desktops through document interchange and document conversion. Using the Information/Resource Sharing services of NAS, KEYpak makes it practical to access and exchange documents without regard to where the documents are created originally.

When the document is converted using KEYpak and accessed for editing, the document appears as if it was created on the document processing system. All the document attributes of the original (e.g. bolding, tabs, margins, etc.) are preserved by KEYpak.

Product Description

KEYpak delivers quality, bi-directional document interchange using an extensive library of conversion software that supports both standard

interchange formats and the most popular VMS, UNIX based and proprietary word processing systems.

KEYpak adds value to several NAS Products :

DECwrite: KEYpak includes support for DDIF. The Import/Export option in the File pull-down menu in DECwrite lists all installed KEYpak converters. With KEYpak, DECwrite users can share documents with other users who have VTs, PCs or Macs on their desktops.

CDA Viewer: Since KEYpak supports DDIF, DECwindows users can view documents created by over 30 different word processing systems.

CDA Converter: With DDIF support, KEYpak complements and extends the CDA Converter Library — for example a WordPerfect (part of the KEYpak library) document can be converted to SGML (part of the CDA Converter library).

ALL-IN-1 IOS: KEYpak is fully integrated to Electronic Messaging and Document Transfer through an ALL-IN-1 custom application — KEYpak+1. With KEYpak+1, users of VTs, PCs, Macs or workstations can use ALL-IN-1 to exchange documents in revisable form — KEYpak converts documents when required and provides seamless Micro/Mainframe file transfers.

ALL-IN-1 DESKtop: DESKtop is designed to provide document interchange through KEYpak. KEYpak increases the value of DESKtop to customers with PCs and Macs.

PATHWORKS (PCSA): PATHWORKS provides the file sharing necessary to facilitate the document sharing enabled by KEYpak.
