

ALL-IN-1 MAIL: KEYpak is fully integrated with ALL-IN-1 MAIL for Dos, Mac, DECwindows and the ALL-IN-1 MAIL server. ALL-IN-1 MAIL users of VTs, PCs, Macs or workstations can exchange documents in revisable form.

Features

- Delivers highest quality conversions.
- Delivers fully revisable document conversion services across VAX and heterogeneous networks.
- Supports most word processing formats.
- Integrates seamlessly with ALL-IN-1 to provide seamless document exchange services.
- Requires minimal or no training.

Benefits

- Facilitates sharing of documents by users of incompatible word processing systems.

- Allows users to choose the appropriate word processor for their application.
- Maximizes the usage of existing software and hardware investments.
- Preserves existing skill sets... training on new word processing software is eliminated.
- Reduces paper transactions & costs.
- Improves user productivity in a multi-vendor environment.
- Eliminates re-keying of information.

System Requirements

Block space requirements:

Disk space required for installation - 20,000 blocks
 Disk space required for use - 400 blocks plus 400 blocks per word processing system supported (eg. a two system KEYpak library requires 1200 blocks)
