

ANE Resources, Inc.

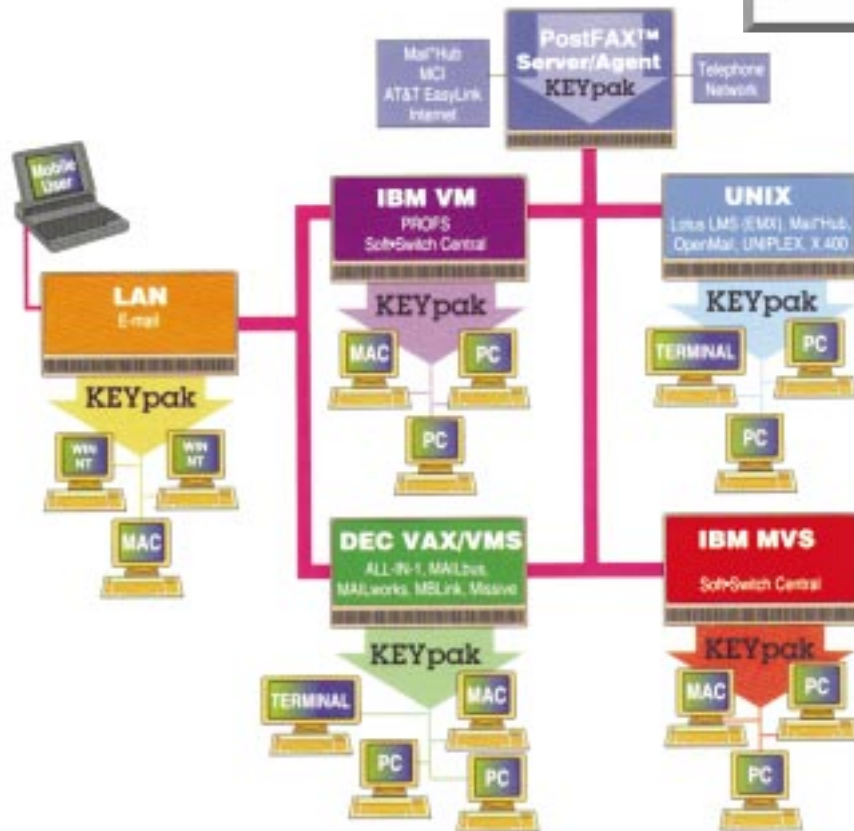

KEYpak®

KEYpak® removes the barriers to sharing electronic documents. KEYpak's document converters allow users of host computer and PC-based document processing systems to exchange fully editable documents while preserving the original formatting. KEYpak integrates with popular electronic mail systems and gateways, providing transparent document conversion for the user and easy maintenance for the administrator.

FEATURES

- Supports Internet use with conversion to HTML
- Supports Microsoft Word for Windows 95
- Runs on a broad range of mainframe, minicomputer and server platforms
- Automatically identifies document file types by content, not extension
- Converts over 130 legacy and PC word processing formats
- Converts 17 graphics formats
- Object-oriented converters support complex documents containing headers, footers, frames, styles, tables, embedded graphics, and fonts
- E-mail and gateway integrations enable automatic in-transit conversion of documents
- Provides high-quality conversion to PostScript
- Built with an extendible architecture to address future format needs

BENEFITS

Reduces the cost of migration

Most organizations today have a plan to move from their legacy office systems (ALL-IN-1, OfficeVision, etc.) environment to client-server technology and personal computer networks. Migration plans often call for a lengthy period of coexistence between these technologies, a one to three year transition or a short-term conversion. Regardless of the term of your migration, KEYpak can reduce the cost of migrating from host office systems to client-server technology (e.g., Profs to Microsoft Word) by:

- saving time and resources by eliminating the need to rekey and reconstruct documents
- saving users' time by performing conversions automatically
- eliminating the cost of user training required for document conversions

Compatibility without the cost

To achieve compatibility, organizations must confront the costs of standardizing on new equipment, new software, and the re-training of users. By implementing KEYpak, document compatibility can be achieved without the heavy costs associated with standardization.

Preserve valuable business documents

KEYpak helps businesses protect their investment in valuable documents residing on their legacy systems. KEYpak provides high-quality conversion service among many different document formats.

Adds value to the network

Automatic file type detection and conversion reduces end-user support needs and makes it easier for administrators to manage the network.

Adds value for end users

With KEYpak on the server, conversions occur transparently to the end user. This eliminates the time and frustration spent dealing with incompatible documents.
