

ANE Resources, Inc.

ANE INTRODUCES: **KEYplus**

Do you need to have your e-mail and documents converted to your new corporate standard format ?

Do you want to do file conversions one-by-one or "en masse"?

For the past few years, you have been an avid customer of DEC's All-in-1 or WPS-Plus for VAX/VMS. Your client base has entered thousands of mail messages and/or word processing documents. They are filed in drawers/folders which enable document management. They have descriptions that are significant. (And they have very strange VMS filenames!)

However, your corporate standard is a client-server based word processing and e-mail solution, maybe Microsoft Word, WordPerfect or AmiPro. And your clients want all or some of their legacy documents accessible to their desktop groupware.

KEYPLUS is our conversion management software. It has been the solution for companies from 25 to over 2000 clients.

KEYPLUS will retrieve your documents and/or e-mail messages. When it reads your e-mail messages, it puts the whole message together (header, attachments, etc.)

KEYPLUS will determine a significant new file name for your document. For example, if your document is about your "VACATION", then the new document will be named VACATION. And if you're going to Windows 95, then we will give you a file name of 39 characters.

KEYPLUS will place the newly converted document in a VMS subdirectory structure that has the same directory names as your drawer/folder.

KEYPLUS uses the KEYpak® conversion software for optimum conversion quality. AND consider our KEYNOTE add-on software to include each file in a Lotus Notes document.

Let KEYPLUS show you how it can make your conversion project the easiest one yet!
